

Would like to change background colour to reflect 'Average Temp' - ie cool blue to hot red

User inputs destination that they are considering travelling to in order to populate 'Squares'.

Used to change date and some information displayed (Ave. Temp and Flight Cost)

Utilises Meteostat API which gives historic weather information.
Changes depending on

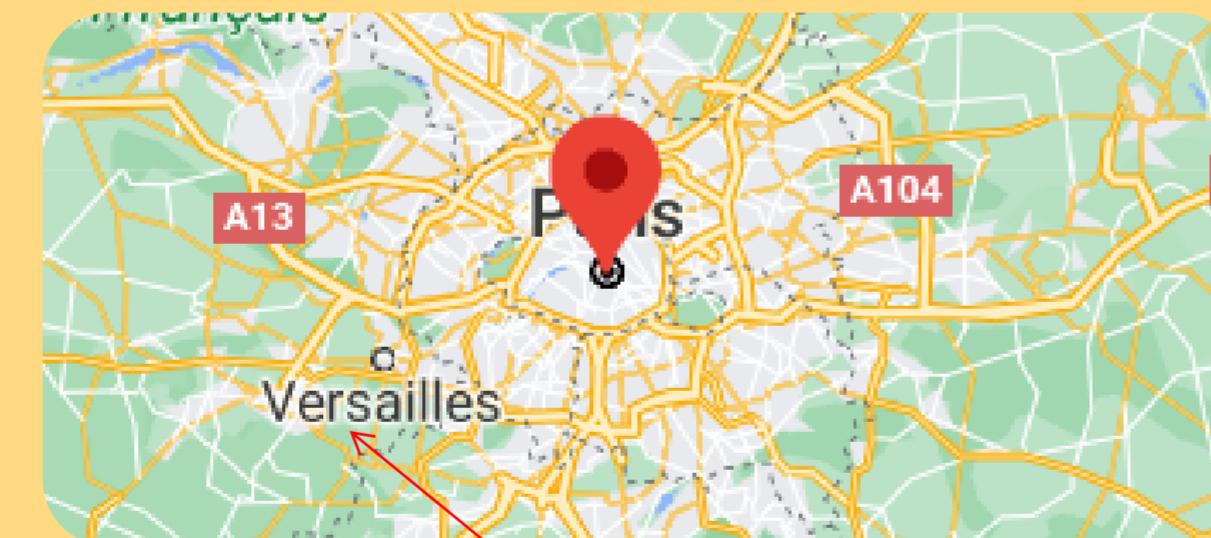

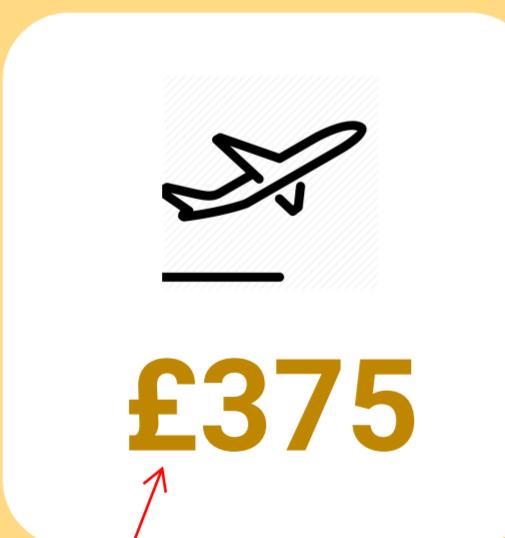

[Destination]

Average temp
30°

Today
36° ☀

Weather from API to be determined for today.

Need to determine how to set 'Current Location'
